Standards Matter – Improving and saving lives

UL Standards encompass UL's extensive safety research and scientific expertise. With over a century of experience in the development of more than 1,500 Standards, UL is an accredited standards developer in the US and Canada. In extending UL Standards' global footprint beyond North America, UL has entered into Memorandums of Understanding (MOUs) with countries around the world in helping build a safer, more sustainable world.

Safety standards are written documents that outline the process in which a product is tested *to help mitigate risk, injury or danger*. UL is a standard-setting organization, combining extensive safety research, scientific expertise and uncompromising focus *on quality to help create a safer world*.

UL Standards development covers more than just products; it also includes testing of systems and services. UL also develops a wide variety of standards to measure and validate performance, environmental health and sustainability.

Process Technology is proud that its products carry the UL certification mark. We continually work to provide our customers with safer heating solutions to help protect personnel, property, and the environment.

Standards Matter!
